

**ISSUES OF PUBLIC HEARING IN THE MATTER OF GRANT OF LICENCE(S)  
FOR GENERATION AND DISTRIBUTION/SUPPLIER OF ELECTRIC POWER  
TO VISION DEVELOPERS (PRIVATE) LIMITED**

- (i) Under the scheme of arrangement proposed by Vision Developers (Private) Limited (VDPL), the per unit cost of electricity using High Speed Diesel fuel is likely to be higher than the average consumer end tariff of LESCO. How VDPL will manage this difference of cost?
- (ii) Whether VDPL will charge its residents/occupants any other charges to raise funds for operation and maintenance of distribution set up of River Edge Housing Scheme (REHS) and cover the additional cost of expansive fuel?
- (iii) Considering the ultimate load of 30.00 MW, what arrangement has been planned to meet the ultimate load demand? Whether a new generation facility will be set up? If yes, what type of fuel will be used considering the impact of fuel on environment and consumer end tariff?
- (iv) Under the NEPRA Amendment Act 2018, exclusive right to distribute and sell electricity has been omitted. Whether VDPL has taken this aspect into consideration and still intends to proceed with the applications for grant of licence(s) for generation and distribution/supplier of electric power?
