

QUARTERLY PERFORMANCE EVALUATION REPORT

JULY-DECEMBER 2024

**DISTRIBUTION
COMPANIES**

**NATIONAL ELECTRIC POWER
REGULATORY AUTHORITY**

Contents

Overview:	2
1. Details of Network:	5
2. Energy Purchased, Sold and Lost	12
3. Transmission and Distribution Losses:	20
4. Billing & Collection, Receivables and Details of Private:	24
5. Recovery	32
6. Aggregate Technical & Commercial Losses	52
7. Detection Billing:	60
8. Defaulter Status:	72
9. Pending New Connections:	78
10. Net Metering Connections:	102
11. Time of Use (ToU) Meters:	105
12. Defective Meters:	108
13. Damaged Transformers:	111
14. Overloading of Power Transformer:	114
15. Overloading of 11kV Feeders:	120
16. Overloading of Distribution Transformer:	123
17. Safety	126
18. Interruptions	130
19. Consumer Complaints	146

Overview:

Prior to the 2018 amendment to the NEPRA Act, Pakistan’s electricity distribution sector operated as an integrated system, where the same company managed both the physical infrastructure (the “wire business”) and the sale of electricity to consumers (the “supply business”). The 2018 amendment decoupled these functions, requiring separate licenses for electricity distribution and supply.

To facilitate this transition, the legislature allowed a five-year implementation period, providing companies with the time needed to adapt to the new regulatory framework, separate their distribution and supply operations, and secure the necessary licenses. During this period, existing distribution companies were granted the status of deemed electric power supply licensees. The primary objective was to foster competition, enhance efficiency, and strengthen regulatory oversight. The amendment clearly established that electricity distribution, including infrastructure management, would become a distinct licensed activity, separate from retail electricity supply, which would also require its own independent license.

Globally, separating these functions is common practice for several reasons:

- **Separation of Responsibilities:** Distributors focus on infrastructure maintenance, while suppliers handle consumer relationships, billing, and supply contracts.
- **Increased Competition:** Consumers can choose from multiple suppliers, leading to improved service and pricing.
- **Improved Regulation:** NEPRA can more effectively oversee each activity, ensuring compliance and transparency.
- **Private Sector Participation:** The reform enables private companies to enter the supply business without being involved in distribution.
- **Sector Reform:** The changes aim to reduce inefficiencies, improve service delivery, and ease the government's financial burden.

The Federal Government notified the Eligibility Criteria (Electric Power Supplier Licenses) Rule, 2023, on August 25, 2023. Under Rule 4 of these criteria, it is, inter-alia, specified that only an applicant holding a distribution license is eligible to obtain a Supplier of Last Resort license from the Authority, within the service territory defined in the distribution license.

Currently, a single company, operating under two separate licenses, typically manages both electricity distribution and supply within its designated territory. In this setup, the company is responsible not only for maintaining the infrastructure that delivers electricity from the transmission network to consumers but also for acting as the primary point of contact for end consumers under its supply license. This dual role means the same company oversees both the physical delivery of electricity and customer-facing aspects such as billing, customer service, and supply contracts. As a result, the objective of the 2018 amendment—fully separating the distribution and supply functions—has not yet been fully realized.

The distribution company plays a critical role in ensuring the development, operation, and maintenance of an efficient and reliable infrastructure. This infrastructure must handle electrical loads without constraints, ensuring a steady, uninterrupted power supply. Additionally, the

distribution company is tasked with minimizing energy losses during transmission, upgrading the network to meet growing demand, preventing system failures, and maintaining compliance with regulatory standards for safety, reliability, and quality of service.

On the other hand, the electricity supplier manages the relationship between the distribution company and end consumers. The supplier's primary responsibility is to receive electricity through the distribution company and deliver it reliably to consumers, ensuring continuous, and high-quality supply while minimizing disruptions.

The electricity supplier also issues accurate bills, processes payments, and maintains transparent billing practices to foster consumer trust. They also work to detect and prevent electricity theft and ensure proper billing.

In Pakistan, there are ten public sector distribution companies and one private sector Company acting as suppliers of last resort. When WAPDA was unbundled over two decades ago, the aim was to corporatize or privatize these companies to foster a competitive market. However, effective corporatization or privatization has not materialized, and these companies have become a financial burden, draining public funds, driving up electricity tariffs, and stifling economic growth.

The performance of public sector distribution companies, especially in Sindh, Khyber Pakhtunkhwa (KP), and Balochistan, remains subpar. Even in Punjab, where companies like LESCO and MEPCO operate, performance continues to fall short of expectations. The failure to establish a competitive market, coupled with a uniform tariff structure, has hindered the efficiency improvements needed across the sector. The lack of market competition and tariff differentiation has prevented the necessary incentives for improved performance and cost-effectiveness.

Key challenges include high transmission and distribution (T&D) losses, low recovery ratios, AT&C (aggregate technical and commercial) losses, load shedding, and rising uncollected receivables. These issues undermine the financial health of the companies, drive up electricity prices, and reduce industrial competitiveness.

Despite NEPRA's efforts to highlight these issues, enforcing change—particularly within public sector companies—has been difficult. Policies like the uniform tariff structure and the treatment of privatized companies similarly to public sector ones have hindered progress.

To address these challenges, NEPRA introduced a portal that requires distribution companies to submit performance data on a monthly basis. This allows NEPRA to issue quarterly or bi-annual reports, enabling more timely interventions to address inefficiencies. The data covers 19 key performance parameters, including system reliability, energy losses, supply security, and customer service quality. While NEPRA analyzes the collected data and engages with distribution companies to address the issues, it also shares this information with stakeholders to facilitate prompt action. Furthermore, the data is made publicly available on NEPRA's website to promote transparency and accountability.

Initially, a total of 19 performance parameters have been selected to assess the efficiency of distribution companies and K-Electric. The reports for the first and second quarters of FY 2024-25 offer valuable insights into the operational performance of the sector, providing a comprehensive overview and identifying key areas for improvement.

The data presented in this report has been provided by the respective distribution companies (DISCOs) through the NEPRA web portal and carefully compiled. While every effort has been

made to ensure accuracy, the responsibility for the accuracy and correctness of the data lies with the respective DISCOs. This report is intended solely for informational, analytical, and research purposes. NEPRA expressly disclaims any liability for legal, commercial, or other claims or disputes arising from the use of the data or any regulatory observations contained in this report.
